

Au cœur de piscines de qualité

Aquabot Neptune

The Aquabot Neptune is designed to clean any residential pool up to 650 square feet (60 square meters) in size. Thanks to the innovative electronic system, the Aquabot will automatically brush, vacuum and microfilter dirt, debris and contaminants from your pool ... all in approximately 3 hours!

Aquabot Neptuno

Environmentally friendly, Aquabot Neptuno functions on safe and economical 24 volt motors. Ultra-modern high speed motor and state-of-the-art technology combine quality and efficiency like no other pool cleaner and pool vacuum produced.

Fully independent, Aquabot Neptuno works without any connection hoses, hook-up booster pumps, or suction lines. They require **NO INSTALLATION, NO SUPERVISION** with **MINIMAL MAINTENANCE**.

Plug the unit in, drop it into the pool and turn it on. When the 3 hour cleaning cycle is over, the Aquabot will turn itself off... automatically.

Specifications

Pool Type	residential swimming pools
Recommended Pool size	60 square meters
Volume of water filtrated	16.00 cubic meter per hour
Filter specifications	reusable 2 micron
Drive Motor	24V-DC High speed submersible
Floating Cable	17.0 meter
Pump Motor	24V-DC High speed submersible
Electrical specifications	230 Volt / 50 Hz / 150 Watt
Shipping Dimensions	46 X 50 X 51 cm
Shipping Weight	17.5 Kg.
